- Reliable Service

## How it works

Citynet installs a high speed data line into your business. via itone, Citynet can provide Voice, Data, Internet and Fax lines directly to your business. Our technology seamlessly integrates with yours so there is no need to replace your phone system or your data network. The only thing you need to do is decide how many phone lines and how much Internet you need... itone does the rest.

Take this example...your company has 20 employees. You lease 15 lines from a local provider paying roughly \$40/month per line. You also need high speed Internet Access and lease that from an Internet Company for \$500/month. Your long distance usage is 2000 minutes and is being managed by a Long Distance provider at .06/minute. You developed your own website, but use a company for email/web hosting and pay \$50/monthly. Your communication bill is \$1270 per month. That same solution from Citynet would cost you \$940. You company just added \$330 to its bottom line per month...\$3960 per year. The only thing you did is choose one vendor to manage the whole process. In addition to the hard savings, think of the time savings in dealing with one vendor.

The bustle of every day business is hectic enough. Business managers don't want to deal with managing multiple vendors and high cost bills in their companies' communication solution. Let Citynet eliminate this headache and save your company money.
